LifeStream™ Remote Health Monitoring Solution

Connected Care. Anytime, Anywhere.

There's no place like home for your patient. That's why we're providing everything you need to make remote monitoring a convenient and effective experience for patients and the care providers.

Life Care Solutions has been providing remote monitoring technology and services for 20 years. Our LifeStream end-to-end solutions are guided and supported by on-staff telehealth clinicians, who work with every customer to help make remote care a simpler proposition, while ensuring patient safety and system effectiveness.

Relatives of homebound patients can truly take part in the patient's care planning. They can virtually sit in on all of the meetings where clinicians and patients are discussing care plans and progress. This is a very powerful thing for patients. We have seen patients tear up simply because they are able to see their loved ones — who might live in another city, state or country — during these sessions. It is so moving that it sometimes has the staff tearing up as well. Really, sometimes there are just tears all around."

— Diane, RN, BayCare

LifeStream is an Ecosystem that Connects Patients and Clinicians

LifeStream is intuitive and easy to use. As a clinician, you always know where to focus care efforts as you can access dashboards and alerts from any location. You can assign questionnaires and patient comprehension, making it easy to evaluate and prioritize patients. It is also easy to connect with patients — and include family members — by initiating video visits from our clinical dashboard.

The LifeStream solution includes a Genesis Touch® tablet that we've customized for patients to use in their own homes. Genesis Touch helps patients communicate with caregivers and learn more about their diseases, health conditions and related treatments.

Our end-to-end solution meets regulatory requirements in the United States and Canada. The result is high-quality products that have passed rigorous testing.

Best of all, LifeStream offers everything you need to make remote patient care a success — consulting from our clinicians, customized training, 24/7 technical support, data analytics, reporting, inventory management, clinical monitoring services and more.

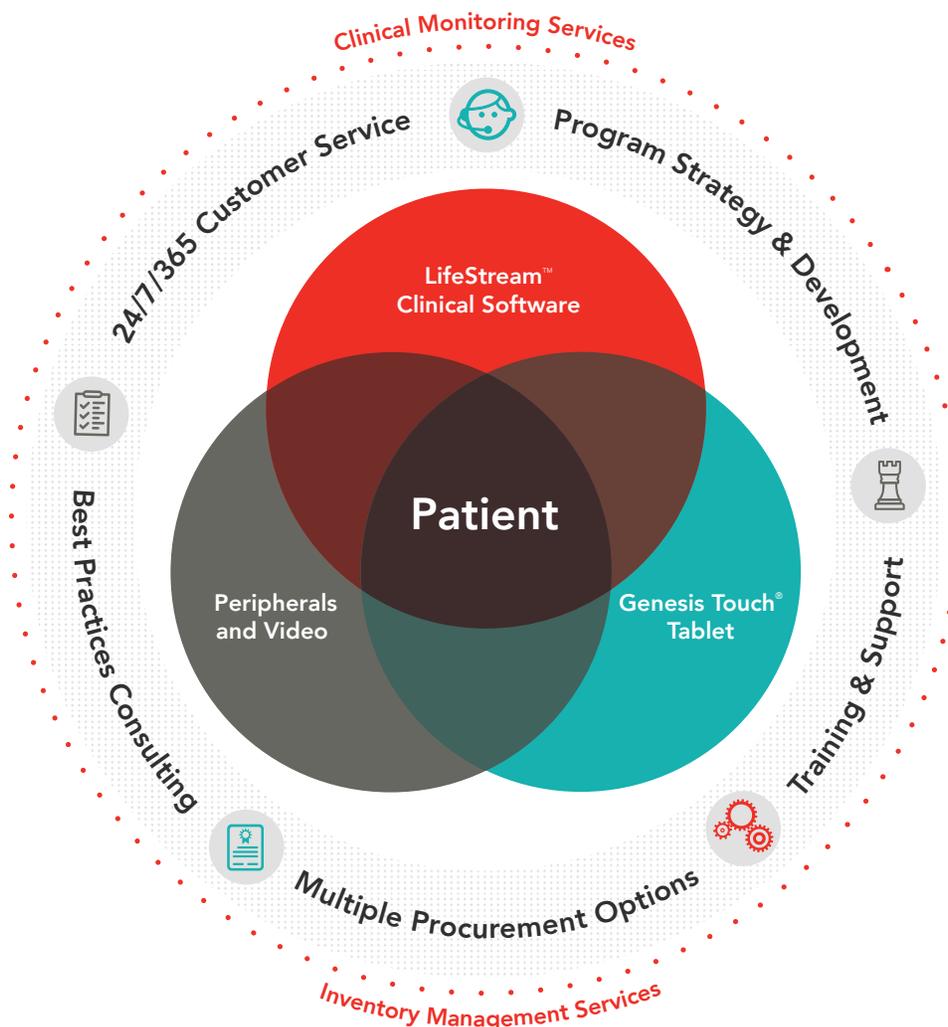

LifeStream Remote Health Monitoring Solution

CONNECTING THE TELEHEALTH ECOSYSTEM

Our telehealth ecosystem focuses on the patient by providing remote patient monitoring solutions to help streamline care coordination and improve outcomes. Your organization can efficiently implement remote care initiatives by relying on our program development, planning and support. Additional services, such as our clinical monitoring services and inventory management, help keep your telehealth programs running smoothly.

Intuitive. Secure. Proven.

LifeStream: Driven by Clinicians

PROVIDING POWERFUL SOFTWARE THAT EMPOWERS CLINICIANS

Video Visits

Integrated video capabilities enable clinicians to initiate and manage video consultations directly from LifeStream's clinical dashboard.

Patient Health Questionnaires

Select and assign standard questions. Or customize questions to monitor behavioral health and other conditions. Remotely schedule and modify questionnaires as needed.

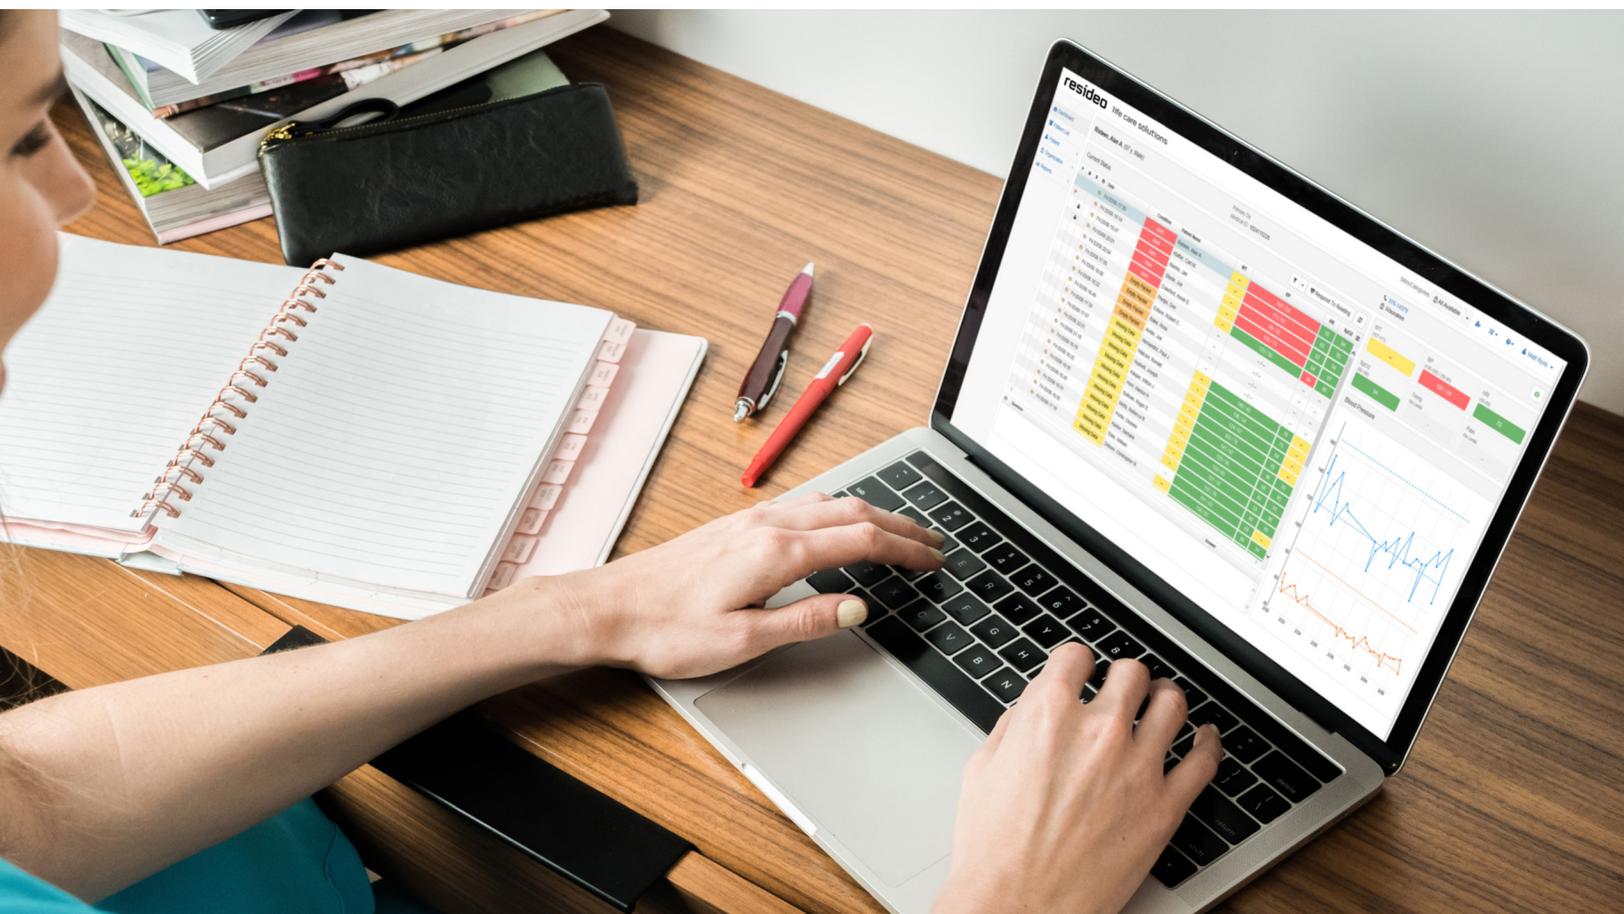

Pain Monitoring

Patients' pain levels can be self-assessed with the Wong-Baker FACES® pain rating scale. Clinicians receive alerts to promptly respond to patient's changing pain levels.

Educational Video Library

Our library of educational videos helps you coach patients to better manage their health. With LifeStream, you can preview/assign videos and monitor patient's video viewing.

Reporting

Our preconfigured reports are easy to customize and export, including information to help with CMS reimbursement. Advanced options are available to help analyze data and determine ROI and program success.

Remote Patient Management

An easy-to-use, calendar-based interface helps schedule vitals readings, questions and education with patients.

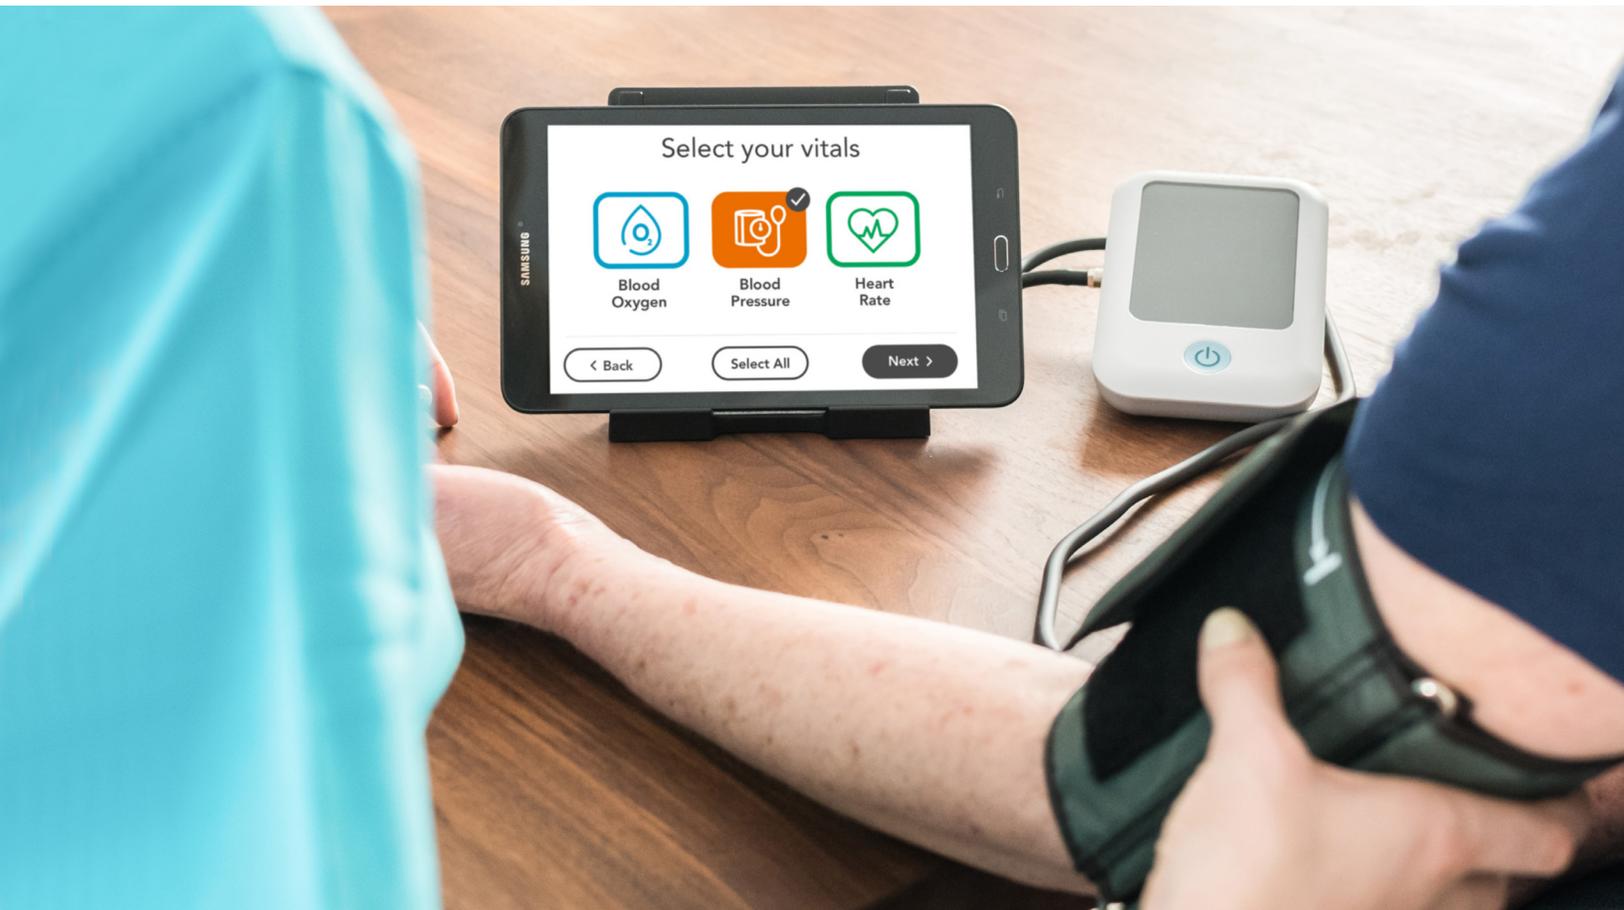

Interoperability

An HL7 interface engine allows for easy communication across multiple EHR platforms.

Enhanced Web Browser Compatibility

Access LifeStream on the web, from a growing list of the most popular web browsers for PC and Mac.

LifeStream: Genesis Touch Patient Tablet

There were several times when I was not feeling well and through telehealth visits the nurses were able to help. By reviewing my vital signs and observing me through telehealth visits, my nurses worked with my physician to change my medication and got my symptoms back under control. Best of all I was able to stay at home where I want to be rather than going back to the hospital."

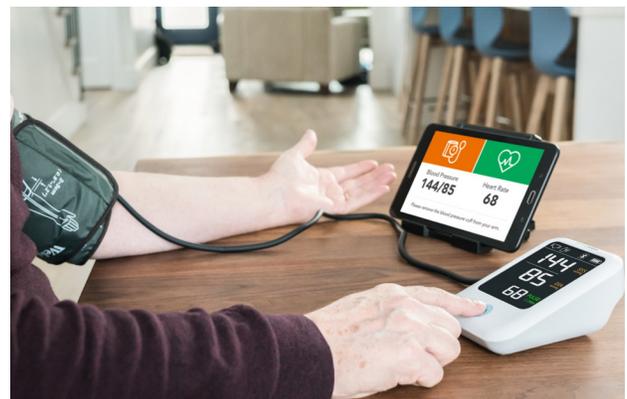

- Jim, end-stage COPD patient

EMPOWERING PATIENTS TO CONNECT WITH CAREGIVERS

LifeStream seamlessly connects with the Genesis Touch® interface to:

- Connect with caregivers via video calls
- Collect vitals
- Assess pain levels
- Answer condition-specific questions
- Learn about their health conditions through educational videos

The tablet easily pairs with the latest Bluetooth®-enabled peripherals for secure one-to-one wireless connectivity, and quick setup in the home. It also features friendly audio and visual prompts in multiple languages.

LifeStream: Monitoring Peripherals

ADDRESSING THE NEEDS OF PATIENTS

LifeStream is compatible with Bluetooth-enabled peripherals that have been proven to provide accurate readings, helping care providers monitor a wider variety of patient populations from a variety of settings. Our standard patient kit contains the blood pressure monitor, wireless scale and pulse oximeter.

Welch Allyn®
Blood Pressure Monitor

Welch Allyn®
Wireless Scale

Nonin®
Pulse Oximeter

Clinical Monitoring Services

CALL CENTER WITH THREE SERVICE LEVELS FOR REMOTE MONITORING

RN OVERSIGHT MODEL

- A clinical call center's healthcare technician acknowledges all alerts, and coordinates member interventions under RN supervision.
- Escalation to the next level of required communication is handled by the healthcare technician.

RN COORDINATING MODEL

- A RN acknowledges all high priority alerts. A healthcare technician acknowledges other alert types.
- A RN provides disease-specific education.

RN CASE MANAGEMENT

- Full-service case management services provided by a RN, customized to your program goals.
- A RN acknowledges all high priority alerts. A healthcare technician acknowledges other alert types.
- A RN provides disease-specific education.

Inventory Management Services

KEEPING YOU FOCUSED ON PATIENT CARE

Customized patient monitoring kits are shipped directly to your patients' doorstep, with all peripherals connected and ready to use. Large-print, colorful setup instructions guide patients through taking their first measurement. Our included shipping label and packaging makes it easy to send everything back.

Flexible Procurement Options

MAKING IT EASY FOR YOU TO PURCHASE

We will structure the deal that meets your needs. Subscriptions ensure patients have access to the latest hardware and peripherals at the beginning of the contract, while clinicians utilize the latest remote patient monitoring features, at a predictable monthly cost. Rentals allow you to flex your telehealth program to meet higher demand. Purchase options are also available.
